

Product Description: A special design of the Crosby Bullard Golden Gate BL-O style hook is available for Harrington's hoist products exclusively through Harrington Hoists, Inc. The BL-O is a "Direct Attach" type of hook that attaches to the last link of the hoist's load chain. The BL-O features:

- Ball bearings, which allow the hook to swivel.
- Rollox Gate is self-closing and lockable in the closed position until the operator releases it.
- Rollox Gate is a rugged brass alloy casting and opens a full 160 degrees.

Application Notes: The BL-O is suitable only as a bottom hook on hoists with a single fall of chain. It cannot be used as a top hook, and it cannot be used on hoists with multiple falls of chain. The BL-O is useful for applications where it is desired to have a positive captivation of the load in the hook's saddle. The rugged Rollox Gate is lockable to help prevent the escape of the load from the hook's saddle.
